

// Project Experience

## Iduapriem

Location: Ghana

Scope: Engineering, Procurement & Construction (EPC)

Completion; 1996

The Iduapriem project was implemented to process low-grade 0.5 g/t gold ore through heap leaching.

The project consisted of a side-tip 150 t/h run-of-mine (ROM) bin, with an apron feeder, self-cleaning vibrating grizzly feeder and primary jaw crusher crushing the ore to -300 mm.

The ore was then fed via a sacrificial and feed conveyor to two Svedala gyratory secondary crushers for further crushing to 25 mm. The final product was conveyed to a leach pad.
